ENHANCE YOUR CAREER

EMPOWER YOUR TEAM

We exist to enable Engineers and Associates
to meet regularly to share expertise,
information and experience.

PSEA Mission Statement

The PSEA is a community-based organization of maintenance professionals and associates that will provide all members development through training and shared knowledge.

The association shall strive to create and maintain an environment that is visionary, sharing, supportive and promotes open communication based on mutual respect for all participants.

The PSEA shall strive to grow by attracting new members and by maintaining a culture that is based on active, responsible and consistent participation, for the benefit of all members.

The Puget Sound Engineers Association was established in 1985. It is comprised of major corporations and brands with other associated groups in the Pacific Northwest.

General membership is extended to anyone in the hospitality industry with responsibilities of physical plant operation and upkeep of their facility.

The PSEA provides continuing education through discussion, technical papers and hosted presentations.

PSEA meetings are conducted monthly with hosted presentations at member properties. Invited guest speakers share with the association technical information and the latest trends in the industry. Following the presentation, there is a round table discussion at which engineers and associates share information, experiences and expertise.

Diverse and dynamic vendor groups are also an integral part of the PSEA
